

SHOPPING MALL MANAGEMENT SYSTEM

INFORMATIC PRACTICES PROJECT

2018 - 19

Computer programming is a process of designing, writing, testing, debugging and maintaining the source code of computer programs written in a particular programming language. The purpose of programming is to organize instructions that are capable of solving real life problems. The process of writing source code of programs requires expertise in subject, knowledge of desired application domain, a formal logic and knowledge of syntax of the relevant programming language.

ACKNOWLEDGEMENT

Acknowledgment is the most beautiful page in any projects initial pages. More than a formality this appears to me the best opportunity to express my gratitude. In the accomplishment of this project successfully, many people have best owned upon me their blessings and the heart pledged support and this time I am utilizing to thank all the people who have been concerned with the project.

Primarily I would like to thank god for being able to complete this project with success. Then I would like to thank our Principal, [Mrs. Arti Sharma](#), and my Informatics Practices teacher, [Mrs. Sandhya Lad](#), whose valuable guidance and support has been the one that helped me to patch this project and make it full proof success. His suggestions and instructions have served as the major contribution towards the completion of this project.

Then I would like to thank my parents and seniors who have helped me with their valuable suggestions, support and guidance which have been very helpful in various phases of completion of this project.

Last but not the least I would like to thank my classmates who have helped me a lot.

INTRODUCTION

This program is designed for the use of **Shopping Mall Management System** and its functioning Main Objective of this project to facilitate the transactions through use of electronic medium. We use **java Netbeans 6.5 software and MySQL** to programming our project.
